10 000 cubic meters of solar power generation

Can solar power produce green hydrogen?
The Project takes advantage of the wealth of photovoltaic resources in Kuqa to achieve 20,000 tons per annum of green hydrogenby using solar power to electrolyze water,along with the capacity to store 210,000 cubic meters of hydrogen and transport 28,000 cubic meters per hour.

What is the average generation capacity of a 100kW Solar System?
The average generation capacity of a 100kw solar system is 400 units/day. 12000 units x 12 months = 144000 units/year. There is a 5 years warranty for the complete system and 25 years for the solar panel. Solar Net Metering applies only to on-grid solar system and hybrid systems (without batteries).

How many units can 1 MW of solar power generate?
A 1-megawatt solar power plant can generate 4,000 units per dayas an average. So accordingly it generates 1,20,000 units per month and 14,40,000 units per year. How many homes can 1 MW of hydro power?

How many units can a 10kW solar system generate?
10kW solar system comes with 30 nos. X 335 watt solar panel. A 335 watt Luminous solar panel is highest and bestselling 24 volt solar panel,made of high quality silicon cells. The conversion efficiency of solar cells in 335 watt solar panel is > 18%. These 30 nos. X 335 watt Luminous solar panel can generate up to 40 unitsover a full sunny day.
