

# 1000 yuan solar power generation

Where does China have a large-scale solar power generation potential?

Especially, more than 85% of large-scale PV generation potential concentrated on Northwest China and Inner Mongolia, where with coal-based power generation structure and developed inter-regional transmission network, accounting for 45% of China's land territory but only 10% of China's water resources [8].

Is solar PV a cost-competitive source of energy in China?

In this case, the cost advantage of solar PV could be further amplified. The decline in costs for solar power and storage systems offers opportunity for solar-plus-storage systems to serve as a cost-competitive source for the future energy system in China.

How much solar power will China have in 2020?

With addition of 48.2 GW in 2020, China's installed capacity of solar PV rose to 253.4 GW (12), far ahead of a target of 105 GW set for 2020 in the 13th 5-y plan (17). The large-scale installation of solar power both globally and in China has promoted improvements in PV conversion efficiencies and reductions in generation costs.

What is the installed capacity of solar power in China?

The installed capacity of solar power in China had grown steadily. The newly installed capacity of solar power was 30.3GW (including an increase of 200MW for CSP), and the cumulative installed capacity had reached 204.74GW (including 440 MW of CSP).

Why is solar PV developing west-to-East in China?

Driven by a combination of limited capacity to integrate variable solar power into the local power systems of the western region and air pollution control policies that increasingly constrain coal use in eastern China, there has been an evident west-to-east shift of solar PV development in China.

How much does solar power cost in China?

In particular, in the economically developed eastern provinces (e.g. Shanghai, Zhejiang, Jiangsu, Guangdong etc.), the PV electricity (mainly BIPV) is 0.67-0.86 RMB/kWh. The cost of LSPV stations ranges from 0.45 to 0.75 RMB/kWh, lower than the BIPV system owing to the scale effect and the strong solar radiation.
