

How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

How to install solar panels?

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted, a roof racking system is first installed. A ground platform is needed if the panels are ground-mounted, and installing the solar panels is not difficult. What is more difficult is wiring them.

Can a PV system be installed on a house?

PV is very modular. You can install as small or as large a PV system as you need. Example: One can install a PV module on each classroom for lighting, put PV power at a gate to run the motorized gate-opener, put PV power on a light pole for street lighting, or put a PV system on a house or building and supply as much energy as wanted.

How does a solar PV system work?

Your solar PV system will typically come with a monitoring system that allows you to track its performance. Some systems even offer real-time monitoring through mobile apps, so you can see how much energy your system is producing. While solar systems generally require very little maintenance, it's important to keep an eye on:

How to plan a PV installation?

**Surface Area:** The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also helps to plan the installation of inverter, converters, and battery banks.

How do I choose a battery for a DIY solar panel?

Choosing the capacity for your battery is largely up to your budget, so for this basic DIY solar panel installation, we recommend a 12V solar panel 100 Amp hour (Ahr) battery. For any battery-backed DIY solar panel system, choosing a PWM charge controller, rather than a MPPT, will be less efficient, but more cost effective.
