

2 photovoltaic panels in the villa

How much does a photovoltaic installation cost?

How much does a photovoltaic installation cost depending on the number of panels? Currently the price of a photovoltaic electrical installation for a house is between EUR0.8 per kWh and EUR1.2 per kWh of annual electricity consumption. This is approximately between EUR500 and EUR600 per solar panel or module for the complete installation.

What are the different types of photovoltaic panels?

The technology used to manufacture the cells contained in the photovoltaic panel will affect its performance, and there are essentially three types of panels. Crystalline panels (poly- and mono-) give the best results in performance and are currently used for the installation of photovoltaic panels in homes.

Do Newhall South Chase houses have photovoltaic roof tiling?

The Newhall South Chase houses also use this strategy, each house featuring 5.4 sqm of photovoltaic roof tiling. Although much more modest than the previous example in terms of scale, the addition of the panel over the sloping roof, which is clad in gray stone, is discreet but also very efficient.
