

5g base station general energy storage system

What is the inner goal of a 5G base station?

The inner goal included the sleep mechanism of the base station, and the optimization of the energy storage charging and discharging strategy, for minimizing the daily electricity expenditure of the 5G base station system.

How much power does a 5G base station use?

The base station can be independently powered by the internal energy storage in a short period, making the 5G base station have flexibility of power utilization and the ability of FR. 5G base station, as a new type of flexible FR resource, consumes approximately 2.3 kW in the none-load state and 4 kW in the full-load state.

How to optimize energy storage planning and operation in 5G base stations?

In the optimal configuration of energy storage in 5G base stations, long-term planning and short-term operation of the energy storage are interconnected. Therefore, a two-layer optimization model was established to optimize the comprehensive benefits of energy storage planning and operation.

Does a 5G base station promote frequency stability?

The proportion of traditional frequency regulation units decreases as renewable energy increases, posing new challenges to the frequency stability of the power system. The energy storage of base station has the potential to promote frequency stability as the construction of the 5G base station accelerates.

Why do 5G base stations need backup batteries?

As the number of 5G base stations, and their power consumption increase significantly compared with that of 4G base stations, the demand for backup batteries increases simultaneously. Moreover, the high investment cost of electricity and energy storage for 5G base stations has become a major problem faced by communication operators.

How many types of 5G base stations are there?

There are two types of 5G base stations: macro-base station and micro-base station. A micro-base station covers small space and consumes little energy. On the contrary, a macro-base station consumes more energy and covers wider space than micro-base station.
