

Will 77 MW solar power be sold to a utility company?

What was once the site of a 300-year-old abandoned salt production plant is now a 77 MW large-scale commercial solar site that produces renewable electricity (see Case Study). This green electricity will be sold to the utility company for 20 years of dependable revenue.

Can a community photovoltaic-energy storage-integrated charging station benefit urban residential areas?

A comprehensive assessment of the community photovoltaic-energy storage-integrated charging station. The adoption intention can be clearly understood through diffusion of innovations theory. This infrastructure can bring substantial economic and environmental benefits in urban residential areas.

What measures were approved in the first year of a photovoltaic project?

The introduction of a new authorization system for PV projects, the termination of the tax relief on photovoltaic installations (depreciation of 30% in the first year) and the creation of reverse auctions for large scale systems were some of the measures approved .

How big is a 77 MW solar plant in Tainan?

The plot, near the popular scenic spot of Qigu Mountain just outside of Tainan City, spans more than 550,000 square meters. What was once the site of a 300-year-old abandoned salt production plant is now a 77 MW large-scale commercial solar site that produces renewable electricity (see Case Study).

How to predict electricity generation of PV-es-I CS system?

By using PVsyst 6.70 software for simulation, the predicted electricity generation of the PV-ES-I CS system can be obtained, as shown in Table 2 and Fig. 8 A. Since the installed capacity of the preset PV-ES-I CS system is 21.78 kW, it consists of 36 monocrystalline silicon PV modules of JAM78S30-605/MR model.

What is the policy for promoting photovoltaic energy?

The main policy for promoting photovoltaic energy in the country has been (FiT), introduced in 2000. The policy has been reformed over the years, and the value of FiT was significantly reduced, although remains unaltered for installations with a capacity inferior to 100 kW.

In addition, it is important to mention that global radiation in Jordan is much higher than the values in Europe, for example the yearly global Table 3: Simulation result of the final PV-system PV-modules: DC-AC Inverter: Number module/inverter ...

In addition, the solar PV 1 kW system can give internal rate of return of about 1.714% on investment. Based on assumptions used in this study, solar 1 kW PV system of Rs. 0.9724/kWh is estimated for a project with profitable life of 25 ...
