

A set of home solar panels

How do solar panels work?

When sunlight hits the silicon in solar panels, the electrons get excited, generating an electric current that goes to a solar inverter and is then used to power appliances and devices. If your solar panels produce more energy than your home needs, the extra solar energy can be sent to the utility grid or stored in an energy storage system.

Is solar power a good option for your home?

Solar power can be an attractive prospect for homeowners and shoppers. Home solar technology offers electricity bill savings, more energy independence, and resilience in the face of an increasing rate of power outages. For the environmentally conscious, it provides an eco-friendly alternative to existing electricity sources.

How do I choose a solar installer?

Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar. Comparison-shop by asking multiple installers to come assess your roof.

How to install a solar panel?

Once everything is properly in place, it is time for the solar panel installation. Install the racking system, the panels, the heat sink, the charge controller, the battery bank, the power inverter and the energy meter. Next, double-check all wiring before connecting the energy system to the energy panel to complete the process.

How do I determine my home's solar rooftop potential?

Determine your home's solar potential. Aside from your roof's condition, your home's solar rooftop potential depends on your geographic location, the position of your home in relation to the sun, how much shade you have, and the PV system you and your installer choose.

How many solar panels are enough to power a house?

One solar panel is not enough to power a house. Home solar systems typically feature 10-20 panels to produce enough power to offset 100% of the average household electricity consumption.

5 · Polycrystalline solar panels are one of the oldest types of solar panel in existence, with cells that are made by melting multiple silicon crystals and combining them in a square mould. These blue panels are less efficient, less ...
