

All Chinese deserts are equipped with photovoltaic panels

Does PV power station deployment promote desert greening in China?

In general, the desert greening (with a significant increase in vegetation) in China from PV power station deployment is largely promoted by the policy-driven Photovoltaic Desert Control Projects. However, the human activities effects on vegetation are often superimposed on the long-term climate-driven variations.

What is China's planned solar power plant near Dalat?

The planned solar power project near Dalat, China, is one of the flagships of China's green energy transition. China, which still generates most of its electricity from coal, wants to reduce its consumption of fossil fuels and expand capacity for power generation from renewable sources such as wind and solar. The project is a significant initiative in this regard.

Can solar power control desertification in China?

In recent years, the Chinese government has carried out a series of Photovoltaic Desert Control Projects, aiming to combine the efforts to develop the solar PV sector with measures to control desertification (CGTN, 2017; The state council of the P.R.C., 2019; Cui et al., 2017).

Could PV plants improve climate conditions in China's Gobi deserts?

PV plants in China's northwestern Gobi Deserts would favor lower evaporation and wind. Local climate effects of PV plants are equivalent to or even greater than projected climate variability. PV-induced climate effects could contribute to improving ecological conditions in Gobi Deserts.

Where are PV power stations located in China?

Results show that PV power stations in China's 12 biggest deserts expanded from 0 to 102.56 km² from 2011 to 2018, mainly distributed in the central part of north China. The desert vegetation in the deployment area of PV power stations presented a significant greening trend.

Can a photovoltaic power station be built in the desert?

“Building a photovoltaic power station in the desert is not easy, and requirement for solar equipment is higher due to the windy and sandy environment in the desert,” Miao Ruijun, deputy head of Mengxi New Energy Dalad Photovoltaic Power Station in SPIC Nei Mongol Energy Co, told the Global Times at the site on Saturday.

All Chinese deserts are equipped with photovoltaic panels
