

# Aluminum alloy export photovoltaic bracket

Does aluminum alloy need aging heat treatment for solar photovoltaic brackets?

The commonly used aluminum alloy series for solar photovoltaic brackets need to undergo aging heat treatment to achieve the required strength. China Aluminum strictly controls the solution treatment and aging heat treatment process to ensure the required strength of the aluminum alloy brackets.

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.

Does Chalco provide anodized aluminum profiles?

Chalco provides anodized aluminum profiles to further enhance the corrosion resistance of solar aluminum alloy frames. After the production of aluminum profiles, we will provide strict product quality inspection and precise product film pasting, packaging and transportation.

What are the advantages and disadvantages of aluminum solar panels?

And with its good conductivity, aluminum has gradually replaced the position of silver, copper and stainless steel in the solar panels. Compared with traditional materials, aluminum cooling speed is fast, which has a significant advantage in solar PV, because the increase of PV cell temperature will reduce the power generation efficiency.

Which PV mounting structures are internationally certified?

The full range of PV mounting structures (with the trade name HELIOS) is internationally certified according to Eurocode 1 and 9 specifications. The innovative structure designs enable the mounting of all sizes of PV frames, the full variety of all PV technologies patterns, minimizing at the same time the installation time.
