

Analysis of photovoltaic energy storage industry chain segments

What is the solar photovoltaics supply chain review?

The Solar Photovoltaics Supply Chain Review explores the global solar photovoltaics (PV) supply chain and opportunities for developing U.S. manufacturing capacity.

What is the supply chain for solar PV?

The supply chain for solar PV has two branches in the United States: crystalline silicon (c-Si) PV, which made up 84% of the U.S. market in 2020, and cadmium telluride (CdTe) thin film PV, which made up the remaining 16%. The supply chain for c-Si PV starts with the refining of high-purity polysilicon.

How can solar PV supply chain diversification reduce supply chain risks?

Because diversification is one of the key strategies for reducing supply chain risks, the report assesses the opportunities and challenges of developing solar PV supply chains in terms of job creation, investment requirements, manufacturing costs, emissions and recycling.

Are solar PV supply chains cost-competitive?

Currently, the cost competitiveness of existing solar PV manufacturing is a key challenge to diversifying supply chains. China is the most cost-competitive location to manufacture all components of the solar PV supply chain. Costs in China are 10% lower than in India, 20% lower than in the United States, and 35% lower than in Europe.

How much energy does a PV supply chain need?

Investment volume and time to capacity associated with building each key PV supply chain segment for present c-Si and CdTe technologies in the United States. 31 70,000-75,000 MT existing capacity (~26-28 GW @ 2.7g/W). Note: Solar Photovoltaics: Supply Chain Deep

Is solar photovoltaic (PV) a market anchored GIS configuration?

According to the typology of generic GIS configurations proposed by Binza and Truffera (2017), the solar photovoltaic (PV) industry fell into the market-anchored type of GIS in the early phase.

The solar PV industry could create 1 300 manufacturing jobs for each gigawatt of production capacity. The solar PV sector has the potential to double its number of direct manufacturing jobs to 1 million by 2030. The most job-intensive ...
