

# Bai Si Solar Power Generation Project

What is a Si/C-Si HJ solar cell?

Using the most advanced interdigitated back contact (IBC) geometry design, the a-Si/c-Si HJ solar cell has achieved the highest efficiency of 26.7%, and it can also serve as the bottom cell in a stack with perovskite solar cells to efficiencies exceeding 30%.

Do China's solar PV projects have comprehensive benefits?

An evaluation index for solar PV project comprehensive benefits was constructed. China's solar PV projects have a solid demonstration effect with robust replicability. Benefit differences exist among regions, modes, and solar resource areas. Management mechanism is the main factor for large regional differences.

Why is Xi Jinping limiting solar PV development in China?

President Xi Jinping's announcement in 2020 of China's commitment to peak carbon emissions by 2030 and achieve carbon neutrality by 2060 underscores the nation's determination to expand its solar PV capacity. However, the scarcity of land, particularly in developed regions, has emerged as a primary impediment to solar PV development.

Is promoting solar PV generation in China cost-effective?

These results strongly support the argument that promoting the total solar PV generation in China is cost-effective. The price of supplying such solar ranges from 0.14 CNY/kWh to 0.25 CNY/kWh nationally in the pessimistic scenario, and from 0.12 CNY/kWh to 0.25 CNY/kWh in the optimistic scenario, without considering transmission cost.

Are China's solar PV projects replicable?

China's solar PV projects have a solid demonstration effect with robust replicability. Benefit differences exist among regions, modes, and solar resource areas. Management mechanism is the main factor for large regional differences. Current financial performance of PV-PAP in low solar radiation areas is vulnerable.

What is the intelligent PV industry?

The concept of the intelligent PV industry was introduced in 2018, encouraging the integration of artificial intelligence, big data, and other technologies with the PV industry to enhance its position in the global value chain. New forms of PV utilization, such as energy internet, smart energy, and new energy microgrids, were proposed.
