

# Briefly describe the working principle of solar power generation

What is the working principle of a solar power plant?

The working principle is that we use the energy of photons to get the drift current flowing in the circuit using reversed bias p-n junction diode (p-type and n-type silicon combination). 1. Solar Panels It is the heart of the solar power plant. Solar panels consists a number of solar cells. We have got around 35 solar cells in one panel.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels,also called PV panels,are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore,it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

Is a solar power plant a conventional power plant?

The solar power plant uses solar energy to produce electrical power. Therefore,it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels. Or there is another way to produce electrical energy that is concentrated solar energy.

What are solar energy systems & how do they work?

Solar energy systems come in all shapes and sizes. Residential systems are found on rooftops across the United States, and businesses are also opting to install solar panels. Utilities, too, are building large solar power plants to provide energy to all customers connected to the grid.

What are the advantages of solar power plants?

The advantages of solar power plants are listed below. Solar energy is a clean and renewable source of energy which is an unexhausted source of energy. After installation,the solar power plant produces electrical energy at almost zero cost. The life of a solar plant is very high. The solar panels can work up to 25 years.
