Should you install solar panels on your roof?

It's no secret that the orientation of your roof is critical when installing solar panels. It can lead to a bit of a complication if the orientations are not compatible with getting the maximum power generation. Roof mounts are also limited in terms of system size - you can only fit a certain amount of panels on a given roof.

Which roof is best for solar panels?

No one type of roof is best for solar panels - mounting solutions exist for just about every roof out there. Some roofs will cost more to mount solar panels on. This is due to the different equipment installers need to use. Start comparing customized solar quotes today on the EnergySage Marketplace.

Do solar panels need roof reinforcements?

Roof reinforcements may be necessary for some installations, depending on factors such as the roof's strength, the weight of the solar system, and local building code requirements. A structural engineer can evaluate the roof's condition and determine whether reinforcements are needed to support the additional load of the solar panels.

Are roof mounted solar panels better?

They may also take longer to install due to the requirement for additional groundwork. Roof mounted solar panels, on the other hand, are space-efficient and tend to be more popular with suburban homeowners because they utilize already existing space: your roof.

How do you install solar panels on a shingle roof?

Asphalt is perhaps the most popular roof material - as such, asphalt shingle solar panel installations are common and straightforward. Installers will drill studs into your roof and attach panel mounts at those locations.

Do solar panels work on metal roofs?

Depending on the type of metal roof you have, installations will differ slightly, but the big takeaway is that solar panels work well on metal roofs. If you have a standing seam metal roof, your solar installer won't have to drill holes in your roof, as panel mounts can be clamped to the raised seams.
