Cite this: ACS Appl. Energy Mater. 2022,5,4,4903-4915 CaCO_3 / CaO materials possess the advantages of low cost,high energy storage density,and working temperature,which offer these materials the potential to be used in thermochemical energy storage systemsfor concentrated solar power plants.

What are the advantages of CaCO_3 / CaO materials?

CaCO_3 / CaO materials possess the advantages of low cost,high energy storage density,and working temperature,which offer these materials the potential to be used in thermochemical energy storage s...

Are CaCO_3 / CaO materials suitable for direct solar use?

However, CaCO_3 / CaO materials possess poor antisintering and optical absorption abilities,largely limiting their practicabilityfor direct solar utilization.

Does CaCO_3 / CaO sinter?

However, CaCO_3 / CaO materials are prone to encounter severe sintering,exhibiting poor thermal energy storage/release stability. To improve the thermochemical energy storage stability,different amounts (5,15,and 30 wt %) of a Zr-based stabilizer were incorporated into CaCO_3 / CaO materials.

Can TiO_2 -incorporated CaO -based pellets be used for thermochemical energy storage?

Comprehensively considering the energy storage/release property and compression strength,the structurally improved, TiO_2 -incorporated CaO -based pellets are potentially applied for thermochemical energy storagein concentrated solar power plants.

Are synthetic CaO -based composites cyclic thermal energy storage/release performances?

The cyclic thermal energy storage/release performances of synthetic CaO -based composites were comparatively investigated under two thermal energy storage modes (CSP-N 2 and CSP-CO 2).
