

What factors were considered in selecting the areas suitable for photovoltaic power generation?

The factors considered in selecting the areas suitable for photovoltaic power generation were economy, terrain, environment for the centralized stations; illumination time, roof type, and shadow obstacles of the building for distributed systems.

How many GW is a photovoltaic power station?

As of 2020, the cumulative grid-connected photovoltaic capacity reached 252.5GW, an increase of 23.6%. Among them, the cumulative installed capacity of centralized photovoltaic power stations is 159.57GW, and the cumulative installed capacity of distributed photovoltaic power stations is 74.83GW.

How do Yang & Campana estimate rooftop PV potential?

Yang and Campana used building statistics and high-precision aerial imagery data to estimate the floor area of different buildings with PV panels and the utilization rate of suitable PV system installations in Västerås, Sweden, to determine the rooftop PV potential of the area.

What is the IEA photovoltaic power systems programme?

The IEA Photovoltaic Power Systems Programme (IEA PVPS) is one of the TCP's within the IEA and was established in 1993. The mission of the programme is to "enhance the international collaborative efforts which facilitate the role of photovoltaic solar energy as a cornerstone in the transition to sustainable energy systems."

How big is photovoltaic power generation in China?

According to data released by the National Energy Administration, the cumulative total installed capacity of photovoltaic power generation in China in 2020 was 253GW, a year-on-year increase of 23.8%. As photovoltaics gradually enter the era of parity and 14-five-year plan, the installed capacity will show a more rapid growth trend.

How big is China's photovoltaic capacity in 2020?

In 2020, China's newly installed grid-connected photovoltaic capacity reached 48.2GW, a year-on-year increase of 60.1%, of which the installed capacity of centralized photovoltaic power plants was 32.7GW, a year-on-year increase of 82.68%; the installed capacity of distributed photovoltaic power plants was 15.5GW, a year-on-year increase of 27.04%.
