

Why is concentrating solar power important in China?

Over 99% of China's technical potential is concentrated in five western provinces. Concentrated solar power (CSP) technology can not only match peak demand in power systems but also play an important role in the carbon neutrality pathway worldwide. Actions in China is decisive.

Can concentrating solar power be developed in China?

Ji J, Tang H, Jin P. Economic potential to develop concentrating solar power in China: a provincial assessment. *Renew Sustain Energy Rev.* 2019;114:109279. Ling-zhi R, Xin-gang Z, Yu-zhuo Z, Yan-bin L. The economic performance of concentrated solar power industry in China. *J Clean Prod.* 2018;205:799-813.

Which technologies are used in concentrated solar power plants in China?

Fig. 6. Annual power generation and potential installed capacity of concentrated solar power (CSP) plants with four different technologies by province in China: (A) Parabolic trough collector (PTC), (B) linear Fresnel collector (LFC), (C) central receiver system (CRS), and (D) parabolic dish system (PDS).

Is China a good place to build a solar power plant?

The results show that China is rich in solar resources and has excellent CSP development potential. Approximately 11% of China's land is suitable for the construction of CSP stations, of which more than 99% is concentrated in five provinces in the northwest region (i.e., Xinjiang, Tibet, Inner Mongolia, Qinghai, and Ningxia).

What is the installed capacity of solar power in China?

The installed capacity of solar power in China had grown steadily. The newly installed capacity of solar power was 30.3GW (including an increase of 200MW for CSP), and the cumulative installed capacity had reached 204.74GW (including 440 MW of CSP).

How many concentrated solar power projects will China build by 2024?

By 2024 China is building 30 Concentrated Solar Power Projects as part of gigawatt-scale renewable energy complexes in each province, appropriately reflecting the urgency and scale needed for climate action
