

# China Power Construction Container Energy Storage

Who provides energy storage & wind power in China?

Project engineering, procurement, and construction (EPC) was provided by Nanjing NR Electric Co., Ltd., while the project's container energy storage battery system was supplied by Gotion High-tech. This project is currently the largest combined wind power and energy storage project in China.

What is the largest combined wind power and energy storage project in China?

This project is currently the largest combined wind power and energy storage project in China. The Inland Plain Wind Farm Project in Mengcheng County is owned by the Anhui Branch of Huaneng International. The project has a total installed capacity of 200MW, with a paired energy storage capacity of 20% and a duration of one hour.

How many new energy storage projects are commissioned in China?

Figure 2: Cumulative installed capacity of new energy storage projects commissioned in China (as of the end of June 2023) In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year.

How big is China's energy storage capacity?

According to incomplete statistics from CNESA DataLink Global Energy Storage Database, by the end of June 2023, the cumulative installed capacity of electrical energy storage projects commissioned in China was 70.2GW, with a year-on-year increase of 44%.

Will China accelerate the development of compressed air energy storage projects?

Now, China is expected to accelerate the development of its far less prevalent compressed air energy storage (CAES) projects to optimize its power grid performance and move in a greener direction.

Why should China develop energy storage?

Experts said developing energy storage is an important step in China's transition from fossil fuels to a renewable energy mix, while mitigating the impact of new energy's randomness, volatility, and intermittence on the grid and managing power supply and demand. "Developing power storage is important for China to achieve green goals.
