

Why is micro-grid important in China?

Micro-grid is becoming an important aspect of future smart grid, which features control flexibility, improved reliability and better power quality. This paper conducts an overview of research and development of micro-grids in China. There are abundant renewable resources in China, which can benefit the development and application of micro-grids.

What is the development potential of China's micro-grid?

"The National Energy Board will build 30 micro-grids demonstration project during "the twelfth 5-year". Preliminary estimates by 2015, China's investment on microgrid will reach 3.167 billion yuan." reported in . Therefore, the development potential of China's micro-grid is huge.

Are there any micro-grid demonstrations built in China?

There are several micro-grid demonstrations are built in China for research and/or power supply for rural areas or islands. To introduce the effect and progresses of China on micro-grids, the available micro-grids are comprehensive reviewed in the following section.

What are the different types of microgrid projects in China?

In China, the microgrid projects that have been completed can be divided into island microgrids, remote areas microgrids, and urban area microgrids based on their geographic locations.

Are there bottlenecks in the development of Microgrid technology in China?

Although the development of microgrid technology in China has achieved some remarkable results, there are many bottlenecks in the comprehensive application and operation and control mode of microgrids involving advanced power electronics, computer control, communications and other technologies.

What is the research on DC microgrids in China?

From 2009 to 2016, research on DC microgrids in China has gradually involved many different aspects, such as the study of DC microgrid power electronic converters, DC circuit breakers, and other key equipment, as well as operation control technology, protection, and energy management. 1.2 China's Current and Planned Policies Regarding MG

If China wants to facilitate massive continental and even global power grid integration, it is right to focus on common governance. But it will either have to convince participants that governance is not just window dressing for ...
