

China Resources New Energy invests in energy storage

Should China invest in energy storage technology?

Subsidies of at least 0.169 yuan/kWh to trigger energy storage technology investment. Energy storage technology is one of the critical supporting technologies to achieve carbon neutrality target. However, the investment in energy storage technology in China faces policy and other uncertain factors.

How has China's energy storage sector benefited from new technologies?

China's energy storage sector nearly quadrupled its capacity from new technologies such as lithium-ion batteries over the past year, after attracting more than 100 billion yuan (US\$13.9 billion) in direct investment over the past couple of years.

Should energy storage be invested in China's peaking auxiliary services?

Therefore, direct investment in future energy storage technologies is the best choice when new technologies are already available. At this stage, the investment threshold for energy storage to involvement in China's peaking auxiliary services is 0.1068 USD/kWh.

What are the challenges facing energy storage technology investment in China?

Despite the Chinese government's introduction of a range of policies to motivate energy storage technology investment, the investment in this field in China still faces a multitude of challenges. The most critical challenge among them is the high level of policy uncertainty.

How big is China's energy investment in 2023?

Our analysis shows that investment in clean power generation and energy storage capacity reached 1.7tn yuan in 2023 (up 48% year-on-year), while investment in manufacturing capacity for solar, EVs and batteries reached 2.5tn yuan (+60%).

What is the investment threshold for energy storage in China?

At this stage, the investment threshold for energy storage to involvement in China's peaking auxiliary services is 0.1068 USD/kWh. In comparison, the current average peak and off-peak power price difference in China is approximately 0.0728-0.0873 USD/kWh.

Another issue that requires close attention is China's continued investment in fossil fuels, especially coal with nearly all the new global coal fired capacity. In tandem with its growing renewable capacity, coal still remains the most ...
