

# China Solar Power Generation Report

How big is China's solar & wind power capacity?

Wind and solar now account for 37% of the total power capacity in the country, an 8% increase from 2022, and widely expected to surpass coal capacity, which is 39% of the total right now, in 2024. Cumulative annual utility-scale solar & wind power capacity in China, in gigawatts (GW)

Can China make more solar power?

China can now make more solar power than the rest of the world. Data released by China's National Agency last week revealed that the country's solar electric power generation capacity grew by a staggering 55.2 percent in 2023. The numbers highlight over 216 gigawatts (GW) of solar power China built during the year.

Did China double solar capacity in 2023?

China more than doubled solar capacity in 2023, and wind power capacity rose by 66 percent from a year earlier, the IEA said.

Will China continue to lead in wind and solar installation in 2023?

All told, 2023 saw unprecedented wind and solar growth in China. The unabated wave of construction guarantees that China will continue leading in wind and solar installation in the near future, far ahead of the rest of the world.

Does China have a commitment to building renewables projects?

The stark contrast in construction rates illustrates the active nature of China's commitment to building renewables projects. Utility-scale solar and wind power capacity in construction, by country Utility-scale solar and wind power capacity in the top ten countries broken down by status, in gigawatts (GW)

What challenges does China face regarding energy generation?

As a fast-growing economy, China faces multiple challenges regarding energy generation, particularly the population growth and economic pressure posed on energy demand.

In 2023, China commissioned as much solar PV as the entire world did in 2022 while its wind additions also grew by 66% year-on-year. Over the past five years, China also added 11 GW of nuclear power, by far the largest of any country in ...
