

China's new energy hybrid energy storage

How big is China's energy storage capacity?

China's installed new-type energy storage capacity had reached 44.44 gigawatts by the end of June, expanding 40 percent compared with the end of last year, the National Energy Administration (NEA) said on Wednesday. Lithium-ion batteries accounted for 97 percent of China's new-type energy storage capacity at the end of June, the NEA added.

Why is China's energy storage capacity expanding?

BEIJING, July 31 -- China's energy storage capacity is expanding to facilitate the utilization of growing renewable power amid the country's efforts to advance its green energy transition.

What percentage of China's energy storage capacity is lithium ion?

Lithium-ion batteries accounted for 97 percent of China's new-type energy storage capacity at the end of June, the NEA added. A number of compressed air, flow battery and sodium-ion battery energy storage projects have started operations, diversifying technological development in the sector, according to the NEA.

Why should China invest in energy storage?

The NEA will actively encourage technological innovation and push ahead with the diversified and high-quality development of new-type energy storage, Bian said. China's energy storage capacity is rocketing to facilitate the utilization of growing renewable power amid the country's efforts to pursue low-carbon development.

What is the demand for energy storage facilities in China?

The rapid growth of renewable energy generation has created a large market demand for energy storage facilities. By the end of the first quarter of 2024, the cumulative installed capacity of new energy-storage projects in China had reached 35.3 million kW.

Why is China's energy storage capacity rocketing?

BEIJING, Jan. 25 -- China's energy storage capacity is rocketing to facilitate the utilization of growing renewable power amid the country's efforts to pursue low-carbon development. China's installed new-type energy storage capacity had reached 31.39 gigawatts by the end of 2023, the National Energy Administration (NEA) said on Thursday.
