

Are ground mounting steel frames suitable for PV solar power plant projects?

In the photovoltaic (PV) solar power plant projects, PV solar panel (SP) support structure is one of the main elements and limited numerical studies exist on PVSP ground mounting steel frames to be a research gap that has not been addressed adequately in the literature.

What makes ArcelorMittal support structures more sustainable?

Use of sunlight using photovoltaic (PV) and solar thermal technologies. Using steel to build the support structures makes it even more sustainable as steel is a durable and 100% recyclable material. ArcelorMittal supports the move to clean energy generation by offering high-performance steels, advanced metallic coatings

Can I use PV panels & flashings based on copper?

Avoid using PV panels or flashings made from materials such as copper, or alloys containing copper or lead. This has the potential to create bi-metallic corrosion resulting from water run-off onto COLORSTEEL® or ZINCALUME® steel. Refer to Incompatible Materials.

Are solar panel support configurations feasible in closed sanitary landfills?

Objective: To analyze the structural feasibility of solar panel support configurations in closed sanitary landfills for better use of these spaces, thus increasing the country's capacity to generate renewable energy in areas where the affectation of ecosystems is low or null.

Does ArcelorMittal offer metallic coatings?

Metallic coating which offers protection in the harshest environments ArcelorMittal offers a full range of metallic coatings to protect steel solar structures against corrosion. In addition to pure zinc and aluminium-zinc coatings, ArcelorMittal
