What should I check before starting a PV inverter?

Commissioning is a critical procedure for a PV system, which can protect the system from fires, and personnel from injury and electrical shock. Before starting the inverter, you should check the following items. The inverter should be accessible for operation, maintenance and service. Check again to confirm that the inverter is firmly installed.

What is the main circuit of a PV inverter?

Fig. 2-5 shows the main circuit of the inverter. The MPPT is utilized for DC input to ensure the maximum power from the PV array at different PV input conditions. The inversion circuit converts the DC power into AC power and feeds the AC power to the utility grid through the AC terminal.

What are the four factors of an inverter?

There are four factors of the inverter: PV, battery, grid, and load. PV and load is the single direction, PV only uses for input, and load for output. Battery and grid is the bi-direction, because the battery can be charged and also can discharge, grid can be input and output.
