

Current status of solar power generation for electric tricycles

How does solar tricycle work?

Photovoltaic cells contained in solar panels convert the solar energy directly into electric energy. Solar Tricycle uses solar energy which convert into electrical with required voltage to charge the battery. There are two types of solar panels that are generally used that is polycrystalline panels and microcrystalline solar panels.

Can a solar-powered tricycle be used for a handicapped person?

Fabrication of solar-powered tricycle for the handicapped person The solar tricycle is developed for the handicapped person. The effective utilization of solar power to operate the tricycle and reduce the physical efforts of the handicapped person were discussed.

Can a solar powered tricycle help people move to longer distances?

A solar powered tricycle helps them move to longer distances. The main objective of this work is to develop a vehicle operated by ecofriendly and less expensive renewable sources of energy. The vehicle can be operated at low speed for long distance. Physically challenged persons mobility can be increased with less effort. 2. Literature review

Can a tricycle battery be charged from a solar panel?

The battery can be charged from solar panels when the tricycle is moving or if it is on a rest and from a charging socket when need. Mounting the solar panel to this vehicle will assist the cyclist in riding the tricycle, reduce fatigue, increase speed and also it provides roof to the traveller.

How many km can a tricycle run per charge?

As per the above calculations we have concluded that the tricycle can run upto 12km per single charge. And by observing the efficiency and performance of all types of solar panels that we have designed that flexible solar panel gives maximum efficiency and it can act as shelter to the tricycle, therefore flexible type solar panel is preferred.

What is solar powered hybrid tricycle?

A Novel idea on solar powered hybrid tricycle can provide a non-polluting and a very silent transport system. It will be self-operated and independent in nature, using solar energy from the sun. The battery can be charged from solar panels when the tricycle is moving or if it is on a rest and from a charging socket when need.
