What is the progress made in solar power generation by PV technology?

Highlights This paper reviews the progress made in solar power generation by PV technology. Performance of solar PV array is strongly dependent on operating conditions. Manufacturing cost of solar power is still high as compared to conventional power. Abstract

How many PV solar installations are there in the world?

The resulting dataset expands the previous publicly available facility-level data for PV solar energy by 432% (in number of facilities), including 18,449 new installations in China, 9,906 in Japan, 4,525 in the United States, 2,021 in India and 17,918 in the European Economic Area.

Is PV a good investment for the energy technology sector?

The energy technology sector is experiencing marked change from its traditional architecture of large-scale,centralized supply systems that take advantage of significant economies of scale. PV certainly fits this trend. Thus traditional cost comparisons based on large bulk power market may be misleading.

Can a global solar PV census be used as a starting point?

We conclude that our dataset provides an initial global census of commercial-,industrial- and utility-scale solar PV installations,and can be used as a starting pointfor a more exhaustive,feature-rich inventory of global solar PV. See Supplementary Information for further details.

What is photovoltaic energy generation?

Energy generation from photovoltaic technology is simple, reliable, available everywhere, in-exhaustive, almost maintenance free, clean and suitable for off-grid applications.
