

# Desert photovoltaic panel transportation plan design

Does PV power station deployment affect desert vegetation?

Previous remote sensing studies of a few PV power stations have demonstrated that the PV power station deployment does not significantly alter desert vegetation (Edalat and Stephen, 2017; Potter, 2016).

Does PV power station deployment promote desert greening in China?

In general, the desert greening (with a significant increase in vegetation) in China from PV power station deployment is largely promoted by the policy-driven Photovoltaic Desert Control Projects. However, the human activities effects on vegetation are often superimposed on the long-term climate-driven variations.

Are deserts a good place to build a PV power station?

Deserts are becoming the ideal places for constructing photovoltaic (PV) power stations, due to sufficient light conditions and broadly available land resources (Tanner et al., 2020). Apart from croplands, deserts are the most deployed areas for PV power stations worldwide by 2018 (Kruitwagen et al., 2021).

Do large-scale PV panels change vegetation in desert areas?

At the macro level, there is still a lack of understanding and evidence of vegetation changes in desert areas resulting from large-scale PV panel deployment, partly because large-scale field surveys can be costly and time-consuming.

Does a PV power plant in the desert have a heating effect?

The PV power plant in the desert has a heating effect on the ambient temperature during the day, but the ambient temperature is not a distinct change at night (Broadbent et al., 2019). The characteristic of heating effect is not only presented daily change.

Should solar power stations be built in desert areas?

As renewable energy development is accelerating globally, more and more PV power stations are built in desert areas to meet the growing demand for sustainable energy (Kruitwagen et al., 2021; Li et al., 2018).
