

# Direct use of solar power generation without energy storage

How does a solar system work without battery storage?

Without battery storage, solar systems typically use the utility grid as a battery. Solar energy is first used to directly power your home and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.

Can you use solar panels without battery storage?

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs.

Why is direct use of solar power important?

Moreover, direct use of solar power avoids the charging and discharging losses caused by batteries, or the energy losses in the transmission infrastructure for grid-connected systems. Both have to be offset by additional solar panels.

How much solar energy can you generate without a battery?

Without the battery and charge controller, the energy cost of the installation also drops from 9,835 MJ to 2,275 MJ. In other words, I could generate at least four times as much solar energy with the same investment in fossil fuels. How can direct solar power be practical?

Is direct solar energy a viable energy source?

Although direct solar energy provides only a small fraction of the global energy supply today, it has the largest technical potential of all energy sources. With technical improvements and cost reductions, it could see dramatically expanded use in the decades to come.

Can solar energy be used in a building?

Solar energy can be used in a building for heating through systems like hybrid thermal storage with active charging and passive heat release. For instance, the EcoTerra demonstration house uses solar-heated air from a building-integrated photovoltaic/thermal system to heat a ventilated concrete slab. Solar energy is used directly in the building.
