

District Microgrid Demonstration Project

How does government support microgrids?

Support for microgrids comes from research and development (R&D) programs at federal and state levels, software and tools, grants and funding support to incentivize demonstration projects, and tax and financial incentives for the installation of distributed energy , , , .

Where does microgrid development take place?

While the federal programs described above were the main engine of early U.S. microgrid research and development, there has always been significant activity at the state and local levels--often arising from self-generation projects, typically at large commercial, campus, medical, or industrial sites.

Who is involved in a microgrid project?

The microgrid project involves multiple customers including the New Belgium Brewery, InteGrid, City of Fort Collins facilities, Larimer County facilities, and Colorado State University main campus facilities, as well as a variety of distributed energy generation technologies.

Which federal investment has facilitated microgrid development in the United States?

Select U.S. Federal microgrid assessment and demonstration projects. Source: OE. Another major federal investment that has facilitated microgrid development in the United States is the American Recovery and Reinvestment Act of 2009 (ARRA).

What are the trends in microgrid software development?

Microgrid software comparison. In general, U.S. microgrid tools development has demonstrated some trends. First, microgrid simulation has evolved from traditional power system-based simulation and optimization to comprehensive power and thermal energy integration modeling.

What is microgrid simulation?

First, microgrid simulation has evolved from traditional power system-based simulation and optimization to comprehensive power and thermal energy integration modeling. The integration of power with simulation modeling provides users systematic modeling capabilities in a microgrid system to address complex energy demand and generation requirements.

This project took the state-of-the-art microgrid controls as a starting point and built on them to improve the level of maturity and to serve as a demonstration project. A significant innovation was adapting a conventional generator control system ...
