What is a hardrock solar pile driver?

Hardrock solar pile driver can drive the pile into soil or rock to support the solar panel for solar power station system and guardrail installation, the common application is for Photovoltaic panels installation. There are several types of Photovoltaic rigs, from manual rig, to semi-hydraulic pile driving machine to fully hydraulic drilling rig.

How deep is a drilled shaft pile for a solar array?

Drilled shaft piles for solar array footings can vary anywhere from 6 to 24 inches in diameter and 5 to 30 feet deep, depending on site conditions and other variables. The drilled shaft or borehole is filled with high-strength cement grout or concrete. At times, steel casing or re-bar is used for reinforcement.

How to install a solar pole in a rig?

Rig has to work with air compressor together for percussion drilling. In this way, it can make a borehole firstly, then put the pile inside or concreting a pile. When it needs to install the solar pole in a more efficient way and have it stably installed, hammering the pile into ground directly is the best way.
