

Are solar thermoelectric generators and PV-Teg based hybrid devices reliable?

Conclusion Solar Thermoelectric Generators and PV-TEG based hybrid devices provides solution to utilize broad spectrum of solar radiation by means of exploring potential of both solar converters and TEGs for power generation. Research effort has been channelled towards realizing these systems as more practical and reliable.

What is solar thermoelectric generation?

Solar radiation is one potential abundant and eco-friendly heat source for this application, where one side of the thermoelectric device is heated by incident sunlight, while the other side is kept at a cooler temperature. This is known as solar thermoelectric generation.

What are the different solar thermoelectric technologies?

This chapter introduces various solar thermoelectric technologies including micro-channel heat pipe evacuated tube solar collector incorporated thermoelectric power generation system, solar concentrating thermoelectric generator using the micro-channel heat pipe array, and novel photovoltaic-thermoelectric power generation system.

What is thermoelectric power generation (TEG)?

Thermoelectric power generation (TEG) is the most effective process that can create electrical current from a thermal gradient directly, based on the Seebeck effect. Solar energy as renewable energy can provide the thermal energy to produce the temperature difference between the hot and cold sides of the thermoelectric device.

How a thermoelectric device can convert solar energy into electrical energy?

With the help of PV arrays, thermoelectric devices can be used to convert solar thermal energy into temperature difference to perform as heater or cooler. Also, these devices can convert solar energy into electrical energy in the form of power generators.

What is integrated solar heat pipe thermoelectric generator module?

The integrated solar heat pipe thermoelectric generator module consists of a square channel for the cooling water, a thermoelectric generator, a heat pipe with selective absorbing coating, and an evacuated tube. Schematic diagram of the micro-channel heat pipe evacuated tube solar collector incorporated thermoelectric module
