

# Electric blinds for air inlet in generator room

How should a generator room be ventilated?

Make sure to put all necessary components of a successful ventilation system into place, including air intake and outlet vents, fans, and air ducts. Browse Used Generators By making sure your generator room is properly ventilated, you can keep things running smoothly and prevent dangerous accidents.

Why do generators need air ventilation?

**Air Cleanliness:** Ventilation helps to remove harmful fumes and foul odors from any enclosed spaces. Generator rooms tend to be in need of air purging as buildup of engine exhaust and other output can be dangerous. Air ventilation systems can also play a role in generator noise reduction.

Why should you install insulated air ducts in a generator room?

By installing insulated air ducts and using smart layout in regards to where air inlet and outlet locations are, noise levels can be controlled. It is vital for generator rooms to be properly ventilated so that generators and other equipment don't overheat, which could cause a serious malfunction.

Where should a generator air duct be placed?

The air should flow over the entire generator horizontally, thereby cooling the alternator and effectively purging internal heat. As for the exhaust fans, they should be placed high and directly above the generator to extract heat and undesirable emissions. **Air Duct:** Duct systems are likely to require multiple turns.

How to design a good ventilation of switchgear and transformer rooms?

In order to design a good ventilation of switchgear and transformer rooms, the air in the room must meet various requirements. The most important is not to exceed the permissible maximum temperature. Limit values for humidity and air quality, e.g. dust content, may also be set.

Why do genset rooms need ventilation?

Ventilation of the genset room has two main purposes. They are to ensure that the life-cycle of the genset does not shorten by operating it correctly and to provide an environment for the maintenance/operation personnel so they can work comfortably. In the genset room, right after the start, an air circulation begins due to the radiator fan.
