

# Electricity price of onshore wind power generation project

How much does onshore wind cost?

Reductions in average O&M costs for onshore wind are also possible, with wind turbine manufacturers increasingly competing on warranties and O&M agreements. Recent analyses estimate the LCOE from onshore wind power projects to be USD 0.06 to USD 0.11/kWh (Lazard 2009).

Why does the cost of wind power vary from onshore to offshore?

While the cost of electricity generated from a typical onshore wind power shows a gradual reduction, having falling by 15% since Q2 2009, that of offshore wind has increased (see Figure 6.6) (BNEF, 2011b). This divergence is due to the higher capital costs of offshore wind developments in recent years.

What are the capital costs of a wind power project?

The capital costs of a wind power project can be broken down into the following major categories: Source: Blanco, 2009. Wind turbine costs include the turbine production, transportation and installation of the turbine. Grid connection costs include cabling, substations and buildings.

How much does a wind power system cost?

The installed capital costs for wind power systems vary significantly depending on the maturity of the market and the local cost structure. China and Denmark have the lowest installed capital costs for new onshore projects of between USD 1 300/kW and USD 1 384/kW in 2010.

Will the cost of grid connection decrease for onshore wind farms?

The cost of grid connection is not likely to decline significantly for onshore wind farms. However, offshore developments can expect to see cost reductions as the scale of wind farms developed increases and as the industry capacity increases.

How much do offshore wind farms cost?

The O&M costs of offshore wind farms are higher due to the difficulties posed by the offshore environment and can be between USD 0.027 and USD 0.048/kWh. Cost reduction opportunities towards best practice levels exist for onshore wind farms, while experience offshore should help to reduce costs over time, but they will always be higher than onshore. 3.
