

Energy storage battery compartment fire protection system diagram

How to protect a battery storage facility from a fire?

Protection goal: Ensure that a fire event cannot spread to the battery storage facility Possible measures: structural separation with sufficient fire resistance, spatial separation or extinguishing systems. Fire event in the area of secondary electronics (power electronics, air conditioning unit ...).

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

How do lithium-ion batteries protect against fire?

Evidence has shown that the key to successful fire protection of lithium-ion batteries is suppressing/extinguishing the fire, reducing of heat-transfer from cell to cell and then cooling the adjacent cells that make up the battery pack/module.

How do you protect a battery module from a fire?

The most practical protection option is usually an external, fixed firefighting system. A fixed firefighting system does not stop an already occurring thermal runaway sequence within a battery module, but it can prevent fire spread from module to module, or from pack to pack, or to adjacent combustibles within the space.

What is a lithium-ion battery energy storage system?

Currently ESS's are available on the market with battery capacities in a range between 5 - 500 kWh and in very large applications with a capacity of several thousand kWh (see table 5). Because of the high energy stored, Lithium-Ion battery energy storage systems are an application with a clear need for comprehensive fire protection.

How to prevent a fire in a battery?

In the case of incipient fires in the vicinity of the batteries (e.g., fire in the power electronics, etc.), reduce the impact in such a way as to ensure that fire spread to the batteries is prevented. Possible measures: Fire alarm system with automatic extinguishing system for electrical risks.
