

How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

How to connect a busbar to an energy storage system?

Connectors for connecting to the busbar simplify the installation of slide-in systems in energy storage systems. The connectors with reverse-polarity protection are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

What are energy storage systems?

Energy storage systems are made up of different components that all contribute to the function of the overall system. Benefit from our portfolio of PCB connections, connectors, and electronics housings that demonstrate our strong innovation power.

How can energy storage systems bring synchronization to the equation?

Energy storage systems can bring synchronization to this equation by storing excess electricity produced by solar power and wind power systems. Whenever the demand for energy from the grid is higher than that available, the energy storage systems can make this excess electricity available again.

Why do we need special connection technology for battery storage systems?

Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently. Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video.

Are busbar connections and battery-pole connectors safe and cost-effective?

Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video. Here you will see how you can install energy storage systems quickly and easily using battery-pole connectors and busbar connections from Phoenix Contact.
