

Energy storage cabinet storage spacing requirements

What is required working space in and around the energy storage system?

The required working spaces in and around the energy storage system must also comply with 110.26. Working space is measured from the edge of the ESS modules, battery cabinets, racks, or trays.

What is the minimum spacing between ESS units?

A minimum spacing of 3 feetis required between ESS units unless 9540A testing allows for closer spacing. ESS location requirements are detailed for areas including garages, accessory structures, utility closets, and outdoors. ESS installed outdoors may not be within 3-feet of doors and windows.

Can pre-engineered and self-contained energy storage systems have working space?

Language found in the last paragraph at 706.10 (C) advises that pre-engineered and self-contained energy storage systems are permitted to have working spacebetween components within the system in accordance with the manufacturer's recommendations and listing of the system.

Are energy storage systems safe?

The emergence of energy storage systems (ESSs), due to production from alternative energies such as wind and solar installations, has driven the need for installation requirements within the National Electrical Code (NEC) for the safe installation of these energy storage systems.

How far apart should storage units be positioned?

Therefore, if you install multiple storage units, you have to space them three feetapart unless the manufacturer has already done large-scale fire testing and can prove closer spacing will not cause fire to propagate between adjacent units.

What are the fire and building codes for energy storage systems?

However, many designers and installers, especially those new to energy storage systems, are unfamiliar with the fire and building codes pertaining to battery installations. Another code-making body is the National Fire Protection Association (NFPA). Some states adopt the NFPA 1 Fire Code rather than the IFC.
