

How many battery storage projects are coming to Texas?

Developers expect to bring more than 300 utility-scale battery storage projects on line in the United States by 2025, and around 50% of the planned capacity installations will be in Texas. The five largest new U.S. battery storage projects that are scheduled to be deployed in California and Texas in 2024 or 2025 are:

Are battery storage projects getting bigger?

Battery storage projects are getting larger in the United States. The battery storage facility owned by Vistra and located at Moss Landing in California is currently the largest in operation in the country, with 750 megawatts (MW).

Are lithium phosphate batteries a good choice for grid-scale storage?

Based on cost and energy density considerations, lithium iron phosphate batteries, a subset of lithium-ion batteries, are still the preferred choice for grid-scale storage.

Why is lithium a major source of demand?

The leading source of lithium demand is the lithium-ion battery industry. Lithium is the backbone of lithium-ion batteries of all kinds, including lithium iron phosphate, NCA and NMC batteries. Supply of lithium therefore remains one of the most crucial elements in shaping the future decarbonisation of light passenger transport and energy storage.

Why is battery energy storage important for SRP?

SRP associate general manager and chief planning strategy and sustainability executive Bobby Olsen stated: "Battery energy storage is an essential piece of SRP's plan to decarbonise our portfolio and maximise the amount of renewable energy delivered to our customers."

Could flow batteries be a breakthrough technology for stationary storage?

Besides lithium-ion batteries, flow batteries could emerge as a breakthrough technology for stationary storage as they do not show performance degradation for 25-30 years and are capable of being sized according to energy storage needs with limited investment.
