

# Environmental assessment requirements for dismantling photovoltaic panels

What should be included in a solar PV end-of-life waste management assessment?

1. Legal framework: This included an assessment of the legal framework and regulatory environment for solar PV end-of-life waste management in each country. 2. Policy objectives: This included an assessment of the policy objectives related to solar PV end-of-life waste management in each country.

Are PV modules decommissioning & recycling required in Canada?

There is no regulation or requirement for PV modules decommissioning and recycling in Canada today, despite the increasing number of modules and the lack of incentive to find a solution.

Are end-of-life solar panels a source of hazardous waste?

End-of-life (EOL) solar panels may become a source of hazardous waste although there are enormous benefits globally from the growth in solar power generation. Global installed PV capacity reached around 400 GW at the end of 2017 and is expected to rise further to 4500 GW by 2050.

What is the patent analysis for PV module recycling?

In the patent analysis, patents mainly filed by private sector were analysed. In addition, by surveying technical papers, technology R&D projects for PV module recycling, which are mainly publicly-funded, were overviewed.

Is there a complete LCA for photovoltaic recycling?

Because PV recycling is a relatively new field, there may not be sufficient data and information available to support a complete LCA. Secondly, with the continuous advancement and innovation of technology, the technology and scale of photovoltaic recycling are also constantly changing.

Can PV panels be exported after decommissioning?

Recently, PV panels are often sold as used panels for export after decommissioning, without entering the waste regime at all. Interview results about current decommissioning practices revealed this information, but little statistical data are available.

The installations of photovoltaic (PV) solar modules are growing extremely fast. As a result of the increase, the volume of modules that reach the end of their life will grow at the same rate in the near future. It is expected that ...
