

European Tour of Photovoltaic Panels

Where do solar panels come from in Europe?

However, the bulk of the demand for solar modules in Europe is covered by imports. Currently, 97% of the solar panels imported into the EU come from China. The charter sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.

Are solar panels transforming Europe's energy landscape?

Solar isn't just for green fields. From roads to railways and reservoirs, here's how Europe's energy landscape is changing for the better. Travelling around Europe on a clear day, you're increasingly likely to spy a sheet of solar panels glinting in the sun.

Will EU support solar PV Manufacturing in Europe reshape global market growth?

The announced support schemes for solar PV manufacturing in Europe, attempting to boost EU's domestic manufacturing capacities and rebuilt its competitiveness in the global PV value chain, are encouraging, but their realisation is not keeping up with global market growth.

How can the EU boost solar energy?

EU measures to boost solar energy include making the installation of solar panels on the rooftops of new buildings obligatory within a specific timeframe, streamlining permitting procedures for renewable energy projects, improving the skills base in the solar sector and boosting the EU's capacity to manufacture photovoltaic panels.

What is the EU solar energy strategy?

As part of the REPowerEU plan, the Commission adopted in May 2022 an EU solar energy strategy, which identifies remaining barriers and challenges in the solar energy sector and outlines initiatives to overcome them and accelerate the deployment of solar technologies.

What is the EU doing with solar energy?

The EU funds many solar cell projects, such as the PERTPV project, in which perovskite-based materials were used to build a new type of solar cell. Photovoltaic technology is becoming more widely used worldwide. Year after year, photovoltaics make up a bigger share of the EU's energy mix.
