

How does the EU support the European solar PV manufacturing sector?

Over the last years, the EU has taken initiatives to strengthen its support to the European solar PV manufacturing sector, which includes several globally competitive companies in several steps of the value chain.

What is the EU solar energy strategy?

As part of the REPowerEU plan, the Commission adopted in May 2022 an EU solar energy strategy, which identifies remaining barriers and challenges in the solar energy sector and outlines initiatives to overcome them and accelerate the deployment of solar technologies.

What instruments are used in a photovoltaic scenario evaluation?

This scenario evaluation considered mandatory instruments such as Eco-Design measures for photovoltaic panels and inverters, augmented by the use of the Energy Label for residential PV systems, and voluntary instruments such as Green Public Procurement Criteria.

Is the EU ready for solar energy?

The EU has long been a front-runner in the roll-out of solar energy. Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's dependence on imported fossil fuels.

Should a residential scale photovoltaic system have an energy label?

The introduction of an Energy Label for residential scale photovoltaic systems will be a novelty for electricity generating equipment and runs a risk of confusing and disincentivising the electricity prosumer.

When will the European Solar charter be implemented?

One year following the signature of the Charter, the Commission will review the implementation of the adopted commitments. The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.
