

# Farmer solar photovoltaic power generation project

Can agrivoltaic projects benefit farmers?

Agrivoltaic projects can benefit farmers by giving them a second crop: electric power. Or, farmers can pick up some extra cash by leasing their land to power companies that will install their own solar panels on the site. Although the idea behind agrivoltaics has been around for decades, interest among farmers has picked up only recently.

What is agrivoltaic farming?

Here's all you need to know about 'agrivoltaic farming' Agrivoltaic farming uses the shaded space underneath solar panels to grow crops. This article was updated on 28 October 2022. Agrivoltaic farming is the practice of growing crops underneath solar panels. Scientific studies show some crops thrive when grown in this way.

How agrivoltaic systems can help farmers in East Africa?

Elsewhere, agrivoltaic systems in East Africa are allowing farmers to make better use of land that was previously seen as unviable. An Agrivoltaic farming project in Kenya is using solar panels held several metres off the ground, with gaps in between them. The shade from the panels protects vegetables from heat stress and water loss.

Could agrivoltaic farming be a solution?

Agrivoltaic farming could be a solution to not just one but both of these problems. It uses the shaded space underneath solar panels to grow crops. This increases land-use efficiency, as it lets solar farms and agriculture share ground, rather than making them compete against one another.

Should agrivoltaic planners put solar over a farm?

Or farm first, and put solar over it?" If farming is the main priority, she says, then the solar panels may need to be spaced farther apart and possibly be raised higher. Such changes could potentially limit how much electricity those farm fields generate. And agrivoltaic planners may need to treat the soil, Macknick says.

What are agrivoltaic projects?

Agrivoltaic projects bring together farms and solar energy production. Photovoltaic panels can sit atop fields of forage grasses for livestock, such as these sheep. Have feedback on the audio version of this story? Let us know!

Agrivoltaics - the co-location of solar energy installations and agriculture beneath or between rows of photovoltaic panels - has the potential to help ease this land-use conflict. To address climate change, the Biden-Harris ...

Agrivoltaics pairs solar with agriculture, creating energy and providing space for crops, grazing, and native
