

# Fire extinguishing at container energy storage station

Why is a gas extinguishing equipment installed in a container?

A gas extinguishing equipment is installed in the container in consideration of the potential for a fire to occur, as many electric parts including the cells are installed in the container. The installation of fire extinguishing equipment in the container minimizes and optimizes the amount of extinguishing gas, and reduces the extinguishing time.

Can lithium-ion battery ESS be used for fire suppression and explosion prevention?

Recommendation: Research and testing on fire suppression and explosion prevention systems for lithium-ion battery ESS should address project sites over an extended period of time.

What are some safety accidents of energy storage stations?

Some safety accidents of energy storage stations in recent years. A fire broke out during the construction and commissioning of the energy storage power station of Beijing Guoxuan FWT, resulting in the sacrifice of two firefighters, the injury of one firefighter (stable condition) and the loss of one employee in the power station.

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Do fire departments need better training to deal with energy storage system hazards?

Fire departments need data, research, and better training to deal with energy storage system (ESS) hazards. These are the key findings shared by UL's Fire Safety Research Institute (FSRI) and presented by Sean DeCrane, International Association of Fire Fighters Director of Health and Safety Operational Services at SEAC's May 2023 General Meeting.

Are electrochemical energy storage power stations safe?

Such as the thermal-electrical-chemical abuses led to safety accidents is increasing, which is a serious challenge for large-scale commercial application of electrochemical energy storage power stations (EESS).
