

# Fire hazard analysis of photovoltaic panels

Does PV panel system fire safety increase pre-existing fire risk?

This paper set out to review peer reviewed studies and reports on PV system fire safety to identify real fires in PV panel systems and to notice possible errors within PV panel system elements which could increase the pre-existing fire risk. The fire incidents in PV panel systems were classified based on fire origin.

What is a fault tree analysis of fires related to photovoltaic (PV) systems?

A fault tree analysis of fires related to photovoltaic (PV) systems was made with a focus of understanding the failure rate of the electric components. The failure rate of different components of these systems was calculated from data obtained from reports, research studies, and fire incident statistics of four countries.

Do photovoltaic systems improve fire safety?

Studies on photovoltaic modules have mainly focused on improving productivity and performance, while no study has viewed the impact of the use of BAPV and BIPV systems on the overall fire safety of a building. There is not enough literature regarding fire scenarios addressing various types of PV systems, which can be installed on buildings.

Are photovoltaic systems fire prone?

Real fire incidents and faults in PV systems are briefly discussed, more particularly, original fire scenarios and victim fire scenarios. Moreover, studies on fire characteristics of photovoltaic systems and the suggested mitigation strategies are summarized.

Are roof-integrated PV systems a fire risk?

Thus, roof-integrated PV systems had a fire risk which is 20 times higher as for regular stand-off mounted PV generators. This can easily be explained by the fact that buildings with stand-off system are typically covered by a "hard roof" (i.e. tiles), which shields the building from external fires.

Are solar panels a fire hazard?

A survey conducted with 430 fire cases reported in Germany for 2 years (2011-2013) revealed that 50% of the fire cases were caused by the PV panels, and the rest were incidents caused by external fires. <sup>3</sup> In the United States, by August 2019, seven of 240 Walmart stores that were installed with solar panels on the roofs caught fires. <sup>4</sup>
