

How many GW of photovoltaic installations are there in the world?

As a result of sustained investment and continual innovation in technology, project financing, and execution, over 100 MW of new photovoltaic (PV) installation is being added to global installed capacity every day since 2013, which resulted in the present global installed capacity of approximately 655 GW (refer Fig. 1).

How is PV power generation potential assessed in China?

This study used a PV power generation potential assessment system based on Geographic Information Systems (GIS) and Multi-Criteria Decision Making (MCDM) methods to investigate the PV power generation potential in China.

How do we provide a global inventory of PV installations?

Here we provide a global inventory of commercial-, industrial- and utility-scale PV installations (that is, PV generating stations in excess of 10 kilowatts nameplate capacity) by using a longitudinal corpus of remote sensing imagery, machine learning and a large cloud computation infrastructure.

Where is PV power generation mainly concentrated in Xinjiang & Inner Mongolia?

In terms of provinces, PV potential is mainly concentrated in Xinjiang, Inner Mongolia, Qinghai, and other provinces west of the Hu Huanyong Line (Population Distribution Line). The PV power generation potential of the provinces east of this line basically does not exceed 3 PWh, and most of them do not exceed 1 PWh.

How can we evaluate PV power generation potential in different regions?

In the past, many researchers have used different methods to evaluate the potential of PV power generation in different regions: Kais et al. proposed a climate-based empirical ngstrom-PreScott model, using MERRA data to evaluate the PV potential of the Association of Southeast Asian Nations (ASEAN).

Is solar PV a competitive source of new power generation capacity?

Solar PV is emerging as one of the most competitive sources of new power generation capacity after a decade of dramatic cost declines. A decline of 74% in total installed costs was observed between 2010 and 2018 (Figure 10).

Gejiu solar photovoltaic power generation installation
