What are the different types of generator silencers?

Generator silencers come in a wide variety of designs that vary in the way they work, their size and shape, and a few other features. The main types are: Reactive silencers, mute sound by bouncing it around inside one or multiple chambers. This design works best for low to moderate noise level demands.

What is a discharge silencer on a generator?

Vibro-Acoustics' discharge silencers reduce noise transmission through the air exhaust openings of the generator. There are many options to save space and minimize pressure drop. Transitional silencers and full-height baffles are two examples. No two generator applications are the same.

Why did noise control need a generator room silencer?

The Genset Building, located in close proximity to the guest rooms, required sound attenuation due to potential long term operation and frequent system tests. eNoise Control was contacted for help with the generator room silencers.

Does a generator need a silencer?

Depending on your facility's environment, the application, and local ordinances, you may require an advanced level of silencing, or minimal sound dampening may suffice. If a new generator set is of an open configuration, it typically will not come with a silencer, but many manufacturers offer them as accessories.
