Where is the best place for solar energy?

One of the best places on earth for solar energy, due to its exceptional conditions, is the Atacama Desert in Chile. It's close to the equator and at a high elevation, giving it high levels of solar irradiance, which refers to the light energy from the sun. As the driest area in the world, it has limited cloud cover.

Which countries use photovoltaics & concentrated solar power?

The United States conducted much early research in photovoltaics and concentrated solar power and is among the top countries in the world in deploying the technology, being home to 4 of the 10 largest utility-scale photovoltaic power stations in the world as of 2017.

Where do solar panels come from?

China is the world's largest market for both photovoltaics and solar thermal energy. and in the last few years, more than half of the total PV additions came from the country.

Where can I find information on NREL's solar resource data development?

For more information on NREL's solar resource data development, see the National Solar Radiation Database (NSRDB). The maps below illustrate select multiyear annual and monthly average maps and geospatial data from the National Solar Radiation Database (NSRDB) Physical Solar Model (PSM). The PSM covers most of the Americas.

Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such as per capita measures, as well as adding or adapting metadata such as the name or ...
