

# Green electricity wind power photovoltaic power generation

Can wind and solar photovoltaic produce "green energy"?

In this work, an assessment of the potential of two renewable energy plants wind and solar photovoltaic to produce "green energy" is undertaken, those were chosen due to their likely dominance of the future energy market.

Do wind and solar plants produce green energy?

These systems were chosen because of their likely dominance in future energy production. After including ESME for each of the systems in EROI<sub>g</sub> and E<sub>netg</sub> computation, it was found that both wind and solar plants were capable of producing net green energy over their lifetime with wind generation having greater green energy potential.

Can a 50 MW wind and 100 MW solar PV farm produce energy?

An onshore 50 MW wind farm and 100 MW solar PV farm producing an equivalent amount of annual energy were used as case studies to test this expanded method. These systems were chosen because of their likely dominance in future energy production.

Can solar PV and wind energy be scaled?

This work evaluates the net green energy of solar PV and wind energy enabling a scaling of the capability of those technologies. Using the EROI<sub>g</sub> methodology, the net green energy (E<sub>netg</sub>) and EROI<sub>g</sub> for a 50 MW onshore wind farm and a 100 MW solar photovoltaic (PV) are examined.

How will solar PV & wind impact global electricity generation?

The share of solar PV and wind in global electricity generation is forecast to double to 25% in 2028 in our main case. This rapid expansion in the next five years will have implications for power systems worldwide.

Will solar and wind energy lead the growth in US power generation?

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.
