

Guarantee letter for wind power and photovoltaic power generation enterprises

What is a solar availability guarantee?

B. Availability Guarantees. An availability guarantee requires the solar arrays in the project to be available a certain percentage of the time, after excluding hours lost to force majeure, curtailments, and a certain amount of scheduled maintenance and other excused non-available hours.

How to promote a high-quality development of wind and solar power?

To comprehensively promote large-scale and high-quality development of wind and solar power, give priority to local and nearby development and utilization, speed up the construction of decentralized wind and distributed PV power in load centers and surrounding areas, and promote the application of low-wind wind power technologies.

What are the development modes for wind and PV power systems?

In terms of wind and PV power development modes: centralized and decentralized development, land and sea development, nearby and external development, multi-energy complementation, single and multi-scene development will be the direction of the future. Table 1. Relevant policies for integrated development in solar and wind energy systems in China.

What is going on with wind power?

The maximum single capacity of onshore and offshore wind power continues to increase, the diameter of wind turbines continues to grow, and breakthroughs in key core technologies continue to be made.

What is the development potential of offshore wind power technology?

According to World Bank statistics, the development potential of offshore wind power technology in 115 coastal countries or regions around the world has reached 71 billion KW, and the theoretical annual power generation has reached 213 trillion KWH, of which only 11% needs to be developed to meet the world's power demand.

How has the fixed feed-in tariff policy impacted wind and solar power?

Indeed, following the introduction of the fixed feed-in tariff policy, the cumulative installed capacity for both wind and solar power grew dramatically, from 8.4 GW in 2008 to 185 GW in 2018 for wind and from 1 GW in 2010 to 175 GW in 2018 for solar.
