Haizhuang Wind Power 2 0mw wind turbine

How big is Haizhuang wind power?
CSSC Haizhuang Wind Power,based in Chongqing,unveiled the nacelle for the H260-18MW model. At 18 MWin nameplate capacity,the turbine would currently be much larger than anything that is under development throughout the world. But the expected annual output doesn't fare so well.

Who is CSSC Haizhuang Windpower?
CSSC Haizhuang Windpower is under China State Shipbuilding Corporation(CSSC) which is the top shipbuilding company. CSSC Haizhuang Windpower provides wind power product R&D services,complete equipment manufacturing,engineering and technical services,EPC general contracting and full-process financial services.

What is China's first deep sea floating offshore wind turbine?
The turbine - independently researched and designed by CSSC Haizhuang Windpower - marks a crucial milestone in the development of the Chinese floating offshore wind power industry. The towing ceremony of the Chinese first deep sea floating offshore wind turbine--"FuYao" from the CSSC Haizhuang Windpower Chasing the deep-sea wind resource

What is Fuyao wind power?
"FuYao" has the largest capacity of floating turbinesin China,a simple floating structure,and boasts high reliability in its mooring and anchoring system. About CSSC Haizhuang Windpower

What is China's largest floating wind turbine?
The floating wind turbine installed last year is also the first in the world to be connected to a fixed-bottom turbine. China State Shipbuilding Corporation (CSSC) has towed what it says is the country's largest floating wind turbine to its designated location.

What are the advantages of CSSC Haizhuang Windpower's Marine high-speed transmission chain?
inherited with the mature technology of CSSC Haizhuang Windpower's marine high-speed transmission chain,ensuring the stability and reliabilityof transmission system; reduces the impact of additional load to wind turbine on the gearbox; ? gearbox and generator adopt design of easily disassembled and integrated,

Looking at the formula for wind turbine power generation P = 0.5*C p *r*p*R²*V³, where C p is a performance coefficient, r is the air density, R the blade"s length and V the wind speed, one can realize that in the world of ...
