

Harmonic limit requirements for photovoltaic inverters

Do photovoltaic inverters cause harmonic distortion?

The increasing penetration of photovoltaic (PV) systems, consisting of PV panel and PV inverter, may introduce power quality issues to the distribution power system. One critical concern is the harmonic distortion. This paper proposes an analytical harmonic model of PV inverters to assess its harmonic impacts on the distribution systems.

Does a PV inverter have a harmonic impact on distribution systems?

This paper proposes an analytical harmonic model of PV inverters to assess its harmonic impacts on the distribution systems. The model is also verified by both simulation and laboratory experimental results. The proposed model indicates that the PV inverter has both harmonic source characteristic and harmonic impedance characteristic.

Does a PV inverter have a harmonic source and impedance characteristic?

The proposed model indicates that the PV inverter has both harmonic source characteristic and harmonic impedance characteristic. Furthermore, the harmonic emission of PV inverters is affected by two grid operating conditions, namely the grid impedance and background harmonic voltage.

What is harmonic control strategy of photovoltaic inverter?

Therefore, it is necessary to design the harmonic control strategy to improve the corresponding harmonic impedance of photovoltaic inverter so as to improve the harmonic governance ability of photovoltaic grid-connected inverter under the background harmonic of the power grid. 4. Harmonic mitigation control strategy of PV inverter

Does the harmonic emission of a PV inverter comply with the IEC standard?

Furthermore, the harmonic emission of PV inverters is affected by two grid operating conditions, namely the grid impedance and background harmonic voltage. The case studies demonstrate that the harmonic emission of a PV inverter without special harmonic control function can comply with the IEC standard under the normal grid operating conditions.

How can a photovoltaic inverter influence background harmonic characteristics?

Taking the typical grid symmetrical harmonic -5th, +7th, -11th and +13th order harmonic as an example, the impedance network and the definition of harmonic amplification coefficient can be used to analyze the influence of photovoltaic inverter on the corresponding background harmonic characteristics.
