

# House conditions for installing photovoltaic panels

Should you install solar panels on your home?

Installing solar panels on your home can significantly lower your electricity bills over time and help you live more sustainably. It's one of the best decisions homeowners can make both for the environment and their property value. Professional solar installation companies typically install solar panels.

How do I prepare for a solar panel installation?

Installing solar panels helps homeowners save money and invest in cleaner energy. To prepare for an installation, determine your energy needs and home compatibility with a solar panel system. The installation requires complicated electrical work and paperwork that any reliable solar installer can handle.

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.

Should you choose a solar photovoltaic system?

Solar photovoltaic (PV) systems have become an increasingly popular choice for those looking to reduce their carbon footprint and save money on energy bills. Before choosing a new system, homeowners should know how a roof can impact options, the best ways to connect the panels, and more.

Can solar panels be installed on a south-facing roof?

For homes in the Northern Hemisphere, a shade-free, south-facing roof with solar panels placed at a 30-degree tilt is ideal for production. This is not to say that having a roof that is partially shaded, or east- or west-facing, puts a solar PV system out of the question.
